EDUCATION

G. H. Rasoni College of Engineering and Management

Nagpur, India

Bachelor of Technology in Artificial Intelligence and Data Science

Aug. 2023 – June 2027

- Relevant Coursework: Data Structures, Algorithms, Machine Learning, Deep Learning, Database Systems

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL, HTML/CSS, C++

Frameworks & Libraries: React.js, Node.js, Express.js, Flutter, TensorFlow, PyTorch, Keras, LSTM

Databases: MongoDB, MySQL, PostgreSQL, Firebase

Tools & Technologies: Git, Docker, REST APIs, AWS, IoT, Postman

AI/ML: Natural Language Processing, Computer Vision, Predictive Modeling, Time Series Analysis

EXPERIENCE

Machine Learning Intern

Nov. 2025 – Dec. 2025

Prodigy Infotech

Remote

- Developed and evaluated machine learning models, applying data-driven problem-solving techniques.
- Preprocessed and cleaned datasets to enhance model accuracy, aligning with core data science pipelines.
- Engineered a predictive regression model for house price forecasting, performing extensive feature engineering and data preprocessing to optimize prediction accuracy.

PROJECTS

NodeClash - Real-Time Competitive Coding Arena | *React.js, Node.js, WebSockets, MongoDB, Framer Motion* | [GitHub](#) | [Live Site](#) 2026

- Engineered** a real-time 1v1 multiplayer coding platform utilizing **Node.js** and **WebSockets**, achieving sub-100ms state synchronization for live keystrokes and code execution.
- Architected** an efficient algorithmic matchmaking system with isolated, stateful battle rooms backed by **MongoDB**, ensuring zero data collision across concurrent active duels.
- Integrated** a dynamic, AI-driven constraint engine that autonomously injects real-time problem modifiers during live battles to assess adaptability under pressure
- Developed** a high-performance, developer-centric IDE interface featuring a zero-latency DOM and smooth anti-gravity spatial animations using React and Framer Motion.

Tattvam – Product Intelligence App | *React-Native, MongoDB, REST APIs, ML* | [GitHub](#) 2025

- Built cross-platform mobile application enabling users to scan product barcodes and receive instant health ratings
- Designed and implemented ML-powered ingredient analysis engine processing 5,000+ product database entries
- Developed robust backend API using Java and MongoDB handling 1,000+ concurrent user requests
- Integrated barcode scanning SDK and created intuitive UI/UX resulting in 4.5+ star user ratings

Pixel-Brain (AI Image Processing Library) | *Node.js, Sharp, Smartcrop-sharp, WebP* | [GitHub](#) 2026

- Developed a lightweight, AI-powered computer vision wrapper for Node.js utilizing Sharp and Smartcrop-sharp for high-performance image processing.
- Implemented structural edge extraction using Laplacian convolution matrices, highly applicable for complex CV pipelines.
- Integrated saliency detection algorithms for automated smart cropping and optimized heavy images via WebP compression.

ACHIEVEMENTS & LEADERSHIP

Project Completion Rate: Successfully delivered 10+ end-to-end projects from conception to deployment

Technical Expertise: Strong foundation in Artificial Intelligence and backend development, with proven ability to integrate ML models into real-world applications.

Problem Solving: Demonstrated ability to architect scalable solutions for complex real-world problems

Languages: English (Professional), Hindi (Professional), Marathi (Native), German (Elementary)
